After a successful promotional campaign in Tucson in late May and June, the latest generation Corescan laboratory arrived into Hermosillo, Mexico on the 11th of June at the offices of our partner, GeoResolution. The delivery of the automated, hyperspectral core logging instrument marks Corescan's first foray into the Mexican mining market. "As one of the world's leading mining centers and business-friendly countries, Mexico ranks highly in our expansion plans. We are delighted to be working alongside GeoResolution as we grow our services in the region." commented Neil Goodey, Corescan's Managing Director.

The interest in Corescan's services has been building since the GeoResolution partnership was announced in March of 2014. Julio Palomino, Director of GeoResolution and a 20 year veteran of remote sensing services for mining, has been overwhelmed by the response to the commissioning of the laboratory at GeoResolution's newly built facilities in Hermosillo, Sonora. "Our partnership with Corescan drives innovation and brings new opportunities to the Mexican mining industry. It has been exciting to see the level of interest and uptake by our mining community, and we are well underway with scanning completed for numerous companies, from majors through to juniors."

GeoResolution plan to host a series of open days over the coming months to provide tours of the mobile laboratory, to demonstrate the scanning process and to show mineralogical maps and products. An official launch of the new facilities is scheduled for Thursday 28th August. In addition, Corescan and GeoResolution services will be on display at the 11th biennial Seminario Internacional de Minería, 21-24th of October 2014 in Hermosillo, Sonora.

ABOUT CORESCAN

Corescan is a global services company specialising in the scanning, analysis and interpretation of drill core, rock chips and other geological samples for the mining, oil and gas, geothermal and geotechnical industries. As a service driven company, Corescan seeks to be the partner of choice for companies that demand greater objectivity, quality, efficiency and return from their investment in drilling.

ABOUT GEORESOLUTION

GeoResolution is a recently established company founded by a group of mining professionals with wide experience in the mining industry with services covering remote sensing, hyperspectral mapping, lidar and photogrammetric surveys, drilling and heavy equipment services and geological consulting. GeoResolution's goal is to provide an integrated solution that satisfies the needs of our customers.
